Personal feedback about

- The course,
- The Webinars,
- Activity- Adopt A Tree, DA- Know your chemicals &
- Faculty- Dr. V. Sai Saraswathi.

I'd like to start with the course feedback. In my opinion, the course was really very good. VIT's curricular structure is designed in a very good way I must say. The topics are really very helpful and informative and very important as well. On the top of that, u presented the topics to us in a really fabulous way. This course has thus been very fruitful for us.

Next about the webinars, they were really really great. We had chance to interact with the very high placed people and know about environment conservation from them. It was very nice experience learning from Dr. Julie Ladel and IFS officer, Dr. Shekar Niraj Kumar. They passed very valuable information to us and encouraged us to involve in environmental conservation.

Further, about the activities, they were also extremely helpful and helped boost our knowledge as well as make us aware about the importance of environment conservation. The first activity was more of a informative kind. It helped us to know and become aware about a lot of harmful things being used in our daily life around us. After that, I even reduced the use of such products in my home as far as possible. I also made my family members aware about it. The second DA was like practical centric. So, I had great time finding the plant, preparing the garden and planting it. Along with it, I have also prepared site to plant other 20 plants by bringing from the municipal forest office after my FAT. This activity has made us realize the importance of nature and our duty to conserve it. It made us feel a bit closer to nature. So, in overall, the activities were really very fantastic and exactly what a EVS class should give to the students. Thanks a lot ma'am for these.

And at last but not the least, our Faculty, Dr. Sai V Saraswathy. Ma'am you have been a really great teacher. You presented everything of the curriculum in a very interesting way. You have made us know about the things out of the syllabus and had really productive classes. You are one of those selected faculties whom all the students really liked in this semester. You have been really dedicated with your duty of class, assignments and exams. But it was really unfortunate not meeting you in person. We would be so blissed to see you in person whenever we come to VIT. It would be wonderful if we could again study environment related subjects in next semesters from you. We really hope that in our next and upcoming semesters, all the faculties are like you-kind, talented, informative, great way of teaching. Thus, I must say we had been really fortunate that we could have you as our teacher in our very first semester.
