

BIMAL PARAJULI

(20BDS0405)

It was really a very fantastic task. This made me realize how closely connected are we with the nature and its components and also taught about the goodness of protection of the forest and plantation of trees in the bare. Trees are really inevitable part of the ecosystem sustainability. We should all plant and encourage others as well to plant trees in the bare land and maintain the environmental greenary.

Kudos to our professor for assigning us this wonderful task.
