The yEd Live browser app

If you want to try diagramming directly within your browser without downloading an app, consider giving our yEd Live a spin!

Graphity - the diagram editor for confluence

Graphity is available in the Atlassian Marketplace, in three installment variants: Confluence Cloud, Server and Data Center – officially approved by Atlassian.

Release Notes

The latest release of yEd Graph Editor is version 3.21.1

yEd 3.21.1 - Changes Since 3.21

Bugfixes

- Fixed an error that occurred after changing the display language in yEd.

- Fixed an error that occurred on Windows and macOS operating systems when

  copying (parts of) diagrams to the system clipboard.

yEd 3.21 - Changes Since 3.20.1

General

- The JREs that come with the Windows, macOS, and Linux installers have been

  updated to OpenJDK 15.0.2.

New Features

  other.

- Added new clustering implementations for the organic layout algorithm.

Improvements

- Improved edge routing for the orthogonal/polyline edge routing algorithm. The

  algorithm now tries to preserve existing orthogonal routes as much as possible.

Bugfixes

- Fixed problems with native file chooser dialogs on Windows.

- Fixed regression that prevented layout algorithms to properly connect edges to

  the visual bounds of nodes. [Q&A 21678], [Q&A 22046]

- Fixed regression that prevented pasting of nodes that were copied from inside a closed group node.

- Fixed inconsistent ordering of palette sections in the 'Add to Palette' context menu. [Q&A 19997]

- Fixed selection changes that sometimes occurred after running One-Click layout. [Q&A 22201]

- Many bugfixes great and small.

Removed Features

- Removed yEd's IconFinder client for importing symbols into user-defined palette sections. IconFinder no longer offers the service interface required for this feature.

- Removed the HTML Flash Viewer and SWF export formats. Both formats relied on Adobe™ Flash™ and thus could not be used as intended anymore.
